# Panemalia: Visualising Longitudinal Datasets at the Australian Data Archive

Kevin Pulo

kevin.pulo@anu.edu.au

Australian National University Supercomputing Facility (ANUSF),  
National Computational Infrastructure National Facility (NCI NF),  
Canberra, Australia

2011-11-07

# Longitudinal datasets

---

- Respondents answer survey/questionnaire
  - Mailout, phone, etc
- Follows the same respondents over time
  - Collection “waves”
- ⇒ Very rich form of data
- Excellent scope for advanced and sophisticated visualisation techniques

# Panemalia

---

- Visualisation tool for longitudinal datasets
- Easy to use
  - Integrated with the ADA website
  - Interactively manipulate view of the data
  - Visualisation method presents the data in a simple and direct way

# Use cases

---

- Initial familiarisation (all users)
- Finding information (researchers)
  - Targeted (supporting evidence), or
  - Serendipitous
- Data cleaning (archivists)
  - Problems tend to be visually apparent

# Longitudinal visualisation

---

- Longitudinal datasets contain:
  - Thousands of respondents, answering
  - Hundreds of questions, over
  - Multiple waves

# Longitudinal visualisation

---

- Longitudinal datasets contain:
  - Thousands of respondents, answering
  - Hundreds of questions, over
  - Multiple waves
- The challenge:

**How to visualise this data?**

# Mapping data to space

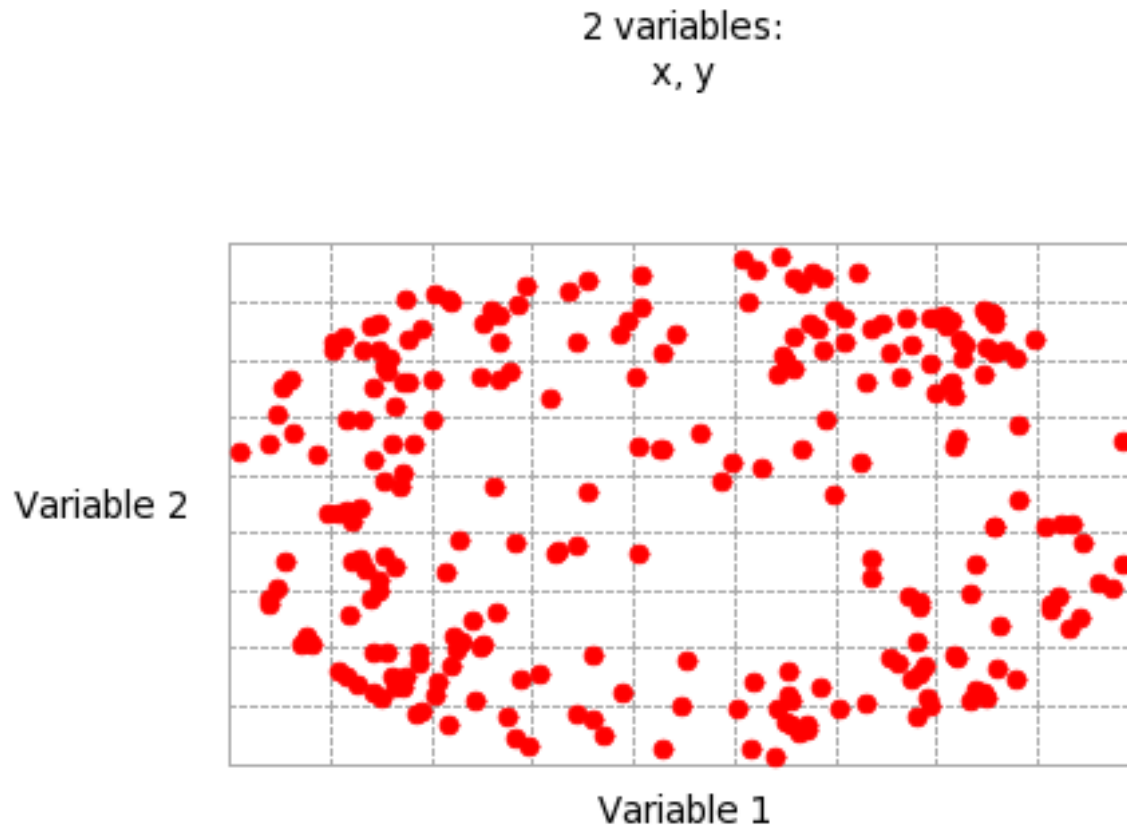

---

- Graphs map variables *directly* to 2D/3D space

# Mapping data to space

---

- Graphs map variables *directly* to 2D/3D space

# Mapping data to space

---

- Graphs map variables *directly* to 2D/3D space

2 variables:  
x, y

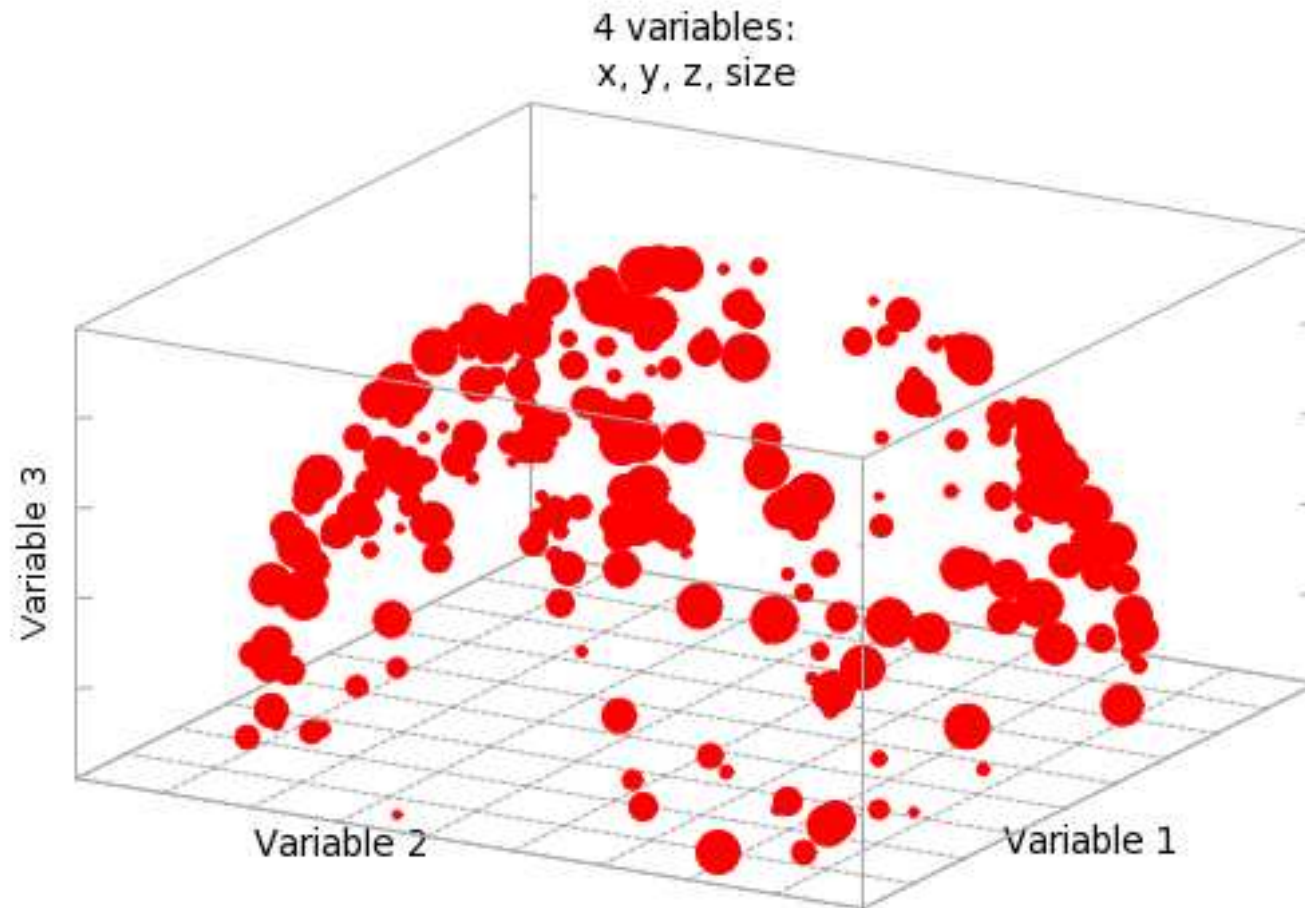

# Mapping data to space

- Graphs map variables *directly* to 2D/3D space

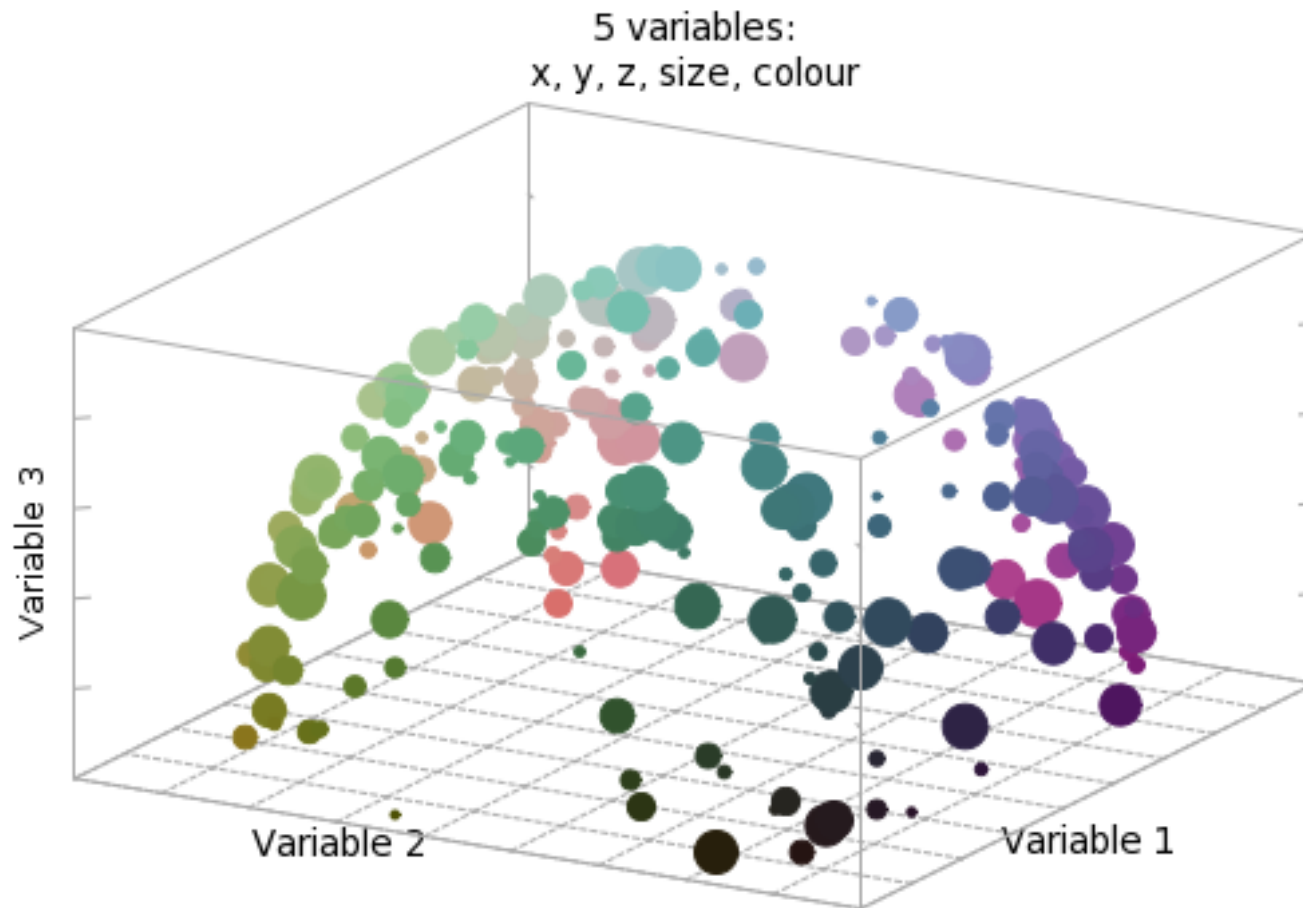

# Mapping data to space

- Graphs map variables *directly* to 2D/3D space

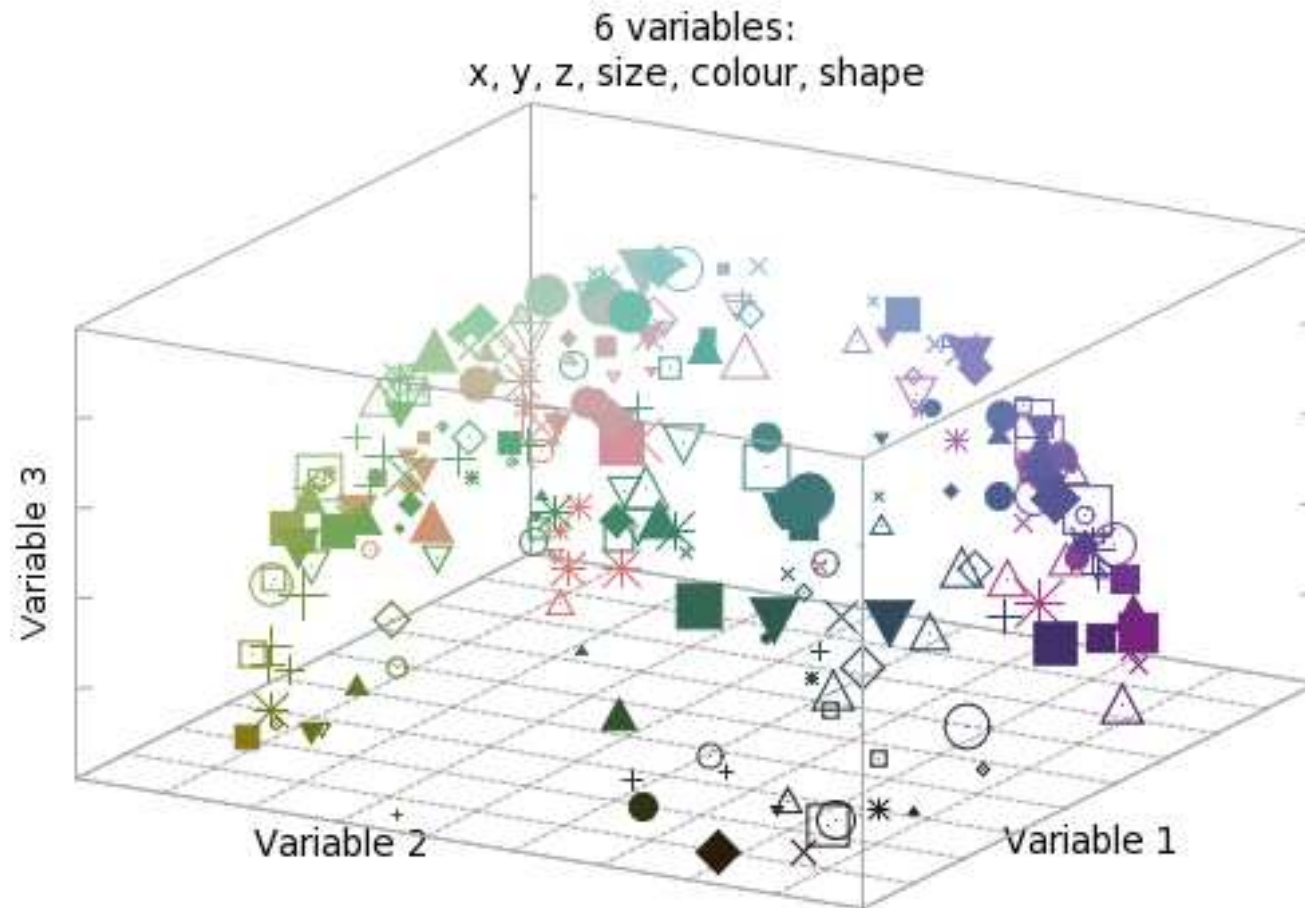

# Mapping data to space

- Graphs map variables *directly* to 2D/3D space

# Mapping data to space

- Graphs map variables *directly* to 2D/3D space

# Visualising multi-dimensional data

---

- But longitudinal datasets have hundreds of variables (at least)

# Visualising multi-dimensional data

---

- But longitudinal datasets have hundreds of variables (at least)
- Cannot possibly map this directly to hundred-dimensional space

# Visualising multi-dimensional data

---

- But longitudinal datasets have hundreds of variables (at least)
- Cannot possibly map this directly to hundred-dimensional space
- Need some way of mapping this high-dimensional data to low-dimensional space

# Visualising multi-dimensional data

---

- But longitudinal datasets have hundreds of variables (at least)
- Cannot possibly map this directly to hundred-dimensional space
- Need some way of mapping this high-dimensional data to low-dimensional space

## Parallel Coordinate Plots

# Parallel Coordinate Plots

---

- Dimensions (axes) are laid out in parallel
- Use lines to join variable values

# Parallel Coordinate Plots

---

- Dimensions (axes) are laid out in parallel
- Use lines to join variable values

# Parallel Coordinate Plots

---

- Dimensions (axes) are laid out in parallel
- Use lines to join variable values

# Parallel Coordinate Plots

---

- Dimensions (axes) are laid out in parallel

- Use lines to join variable values

# Parallel Coordinate Plots

- Dimensions (axes) are laid out in parallel
- Use lines to join variable values

# Parallel Coordinate Plots

- Dimensions (axes) are laid out in parallel
- Use lines to join variable values

# Parallel Coordinate Plots

---

- Dimensions (axes) are laid out in parallel
- Use lines to join variable values

# Parallel Coordinate Plots

- Dimensions (axes) are laid out in parallel
- Use lines to join variable values

# Parallel Coordinate Plots

---

- Dimensions (axes) are laid out in parallel
- Use lines to join variable values

# Parallel Coordinate Plots

- Dimensions (axes) are laid out in parallel
- Use lines to join variable values

# Parallel Coordinate Plots

- Dimensions (axes) are laid out in parallel
- Use lines to join variable values

# Parallel Coordinate Plots

- Dimensions (axes) are laid out in parallel
- Use lines to join variable values

# Advantages

- Allows many dimensions
- Straightforward mapping
- Human perceptual system is good at seeing connectedness and patterns

# Challenge: Ambiguity

Common values cause ambiguity

# Challenge: Ambiguity

Common values cause ambiguity  
Solution: (a) Curves

# Challenge: Ambiguity

Common values cause ambiguity  
Solution: (a) Curves

# Challenge: Ambiguity

Common values cause ambiguity  
Solution: (a) Curves (b) Spreading

# Challenge: Axis parameters

---

View affected by axis ordering, sign, scaling, translation

# Challenge: Axis parameters

View affected by axis ordering, sign, scaling, translation

# Challenge: Axis parameters

View affected by axis ordering, sign, scaling, translation

# Challenge: Axis parameters

View affected by axis ordering, sign, scaling, translation

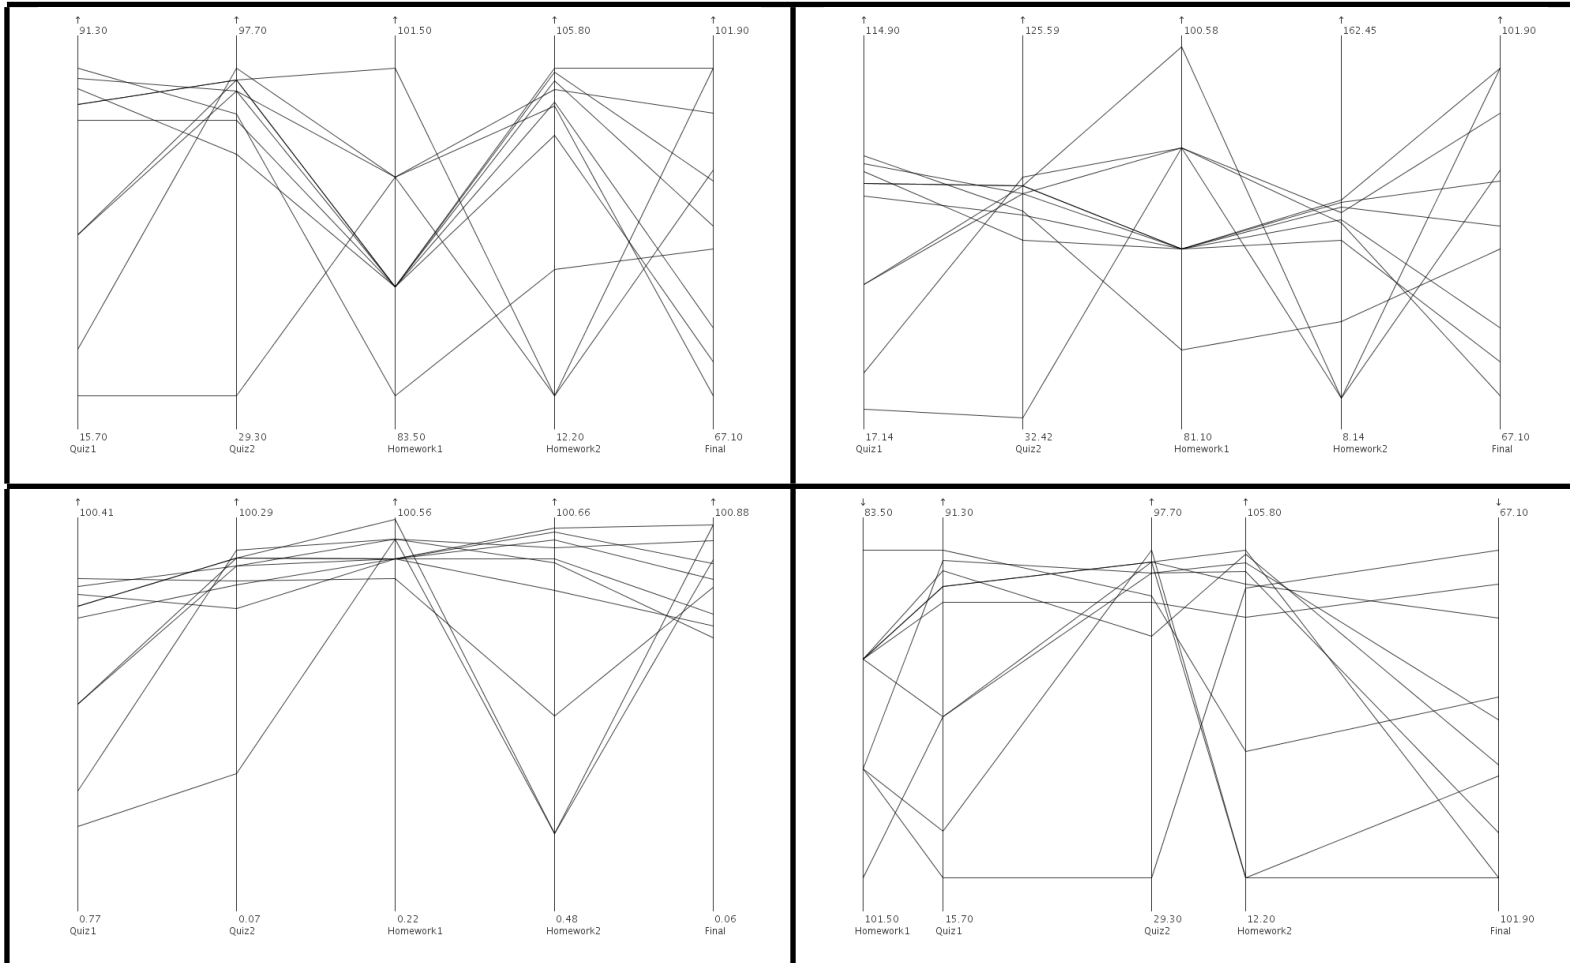

# Challenge: Axis parameters

View affected by axis ordering, sign, scaling, translation

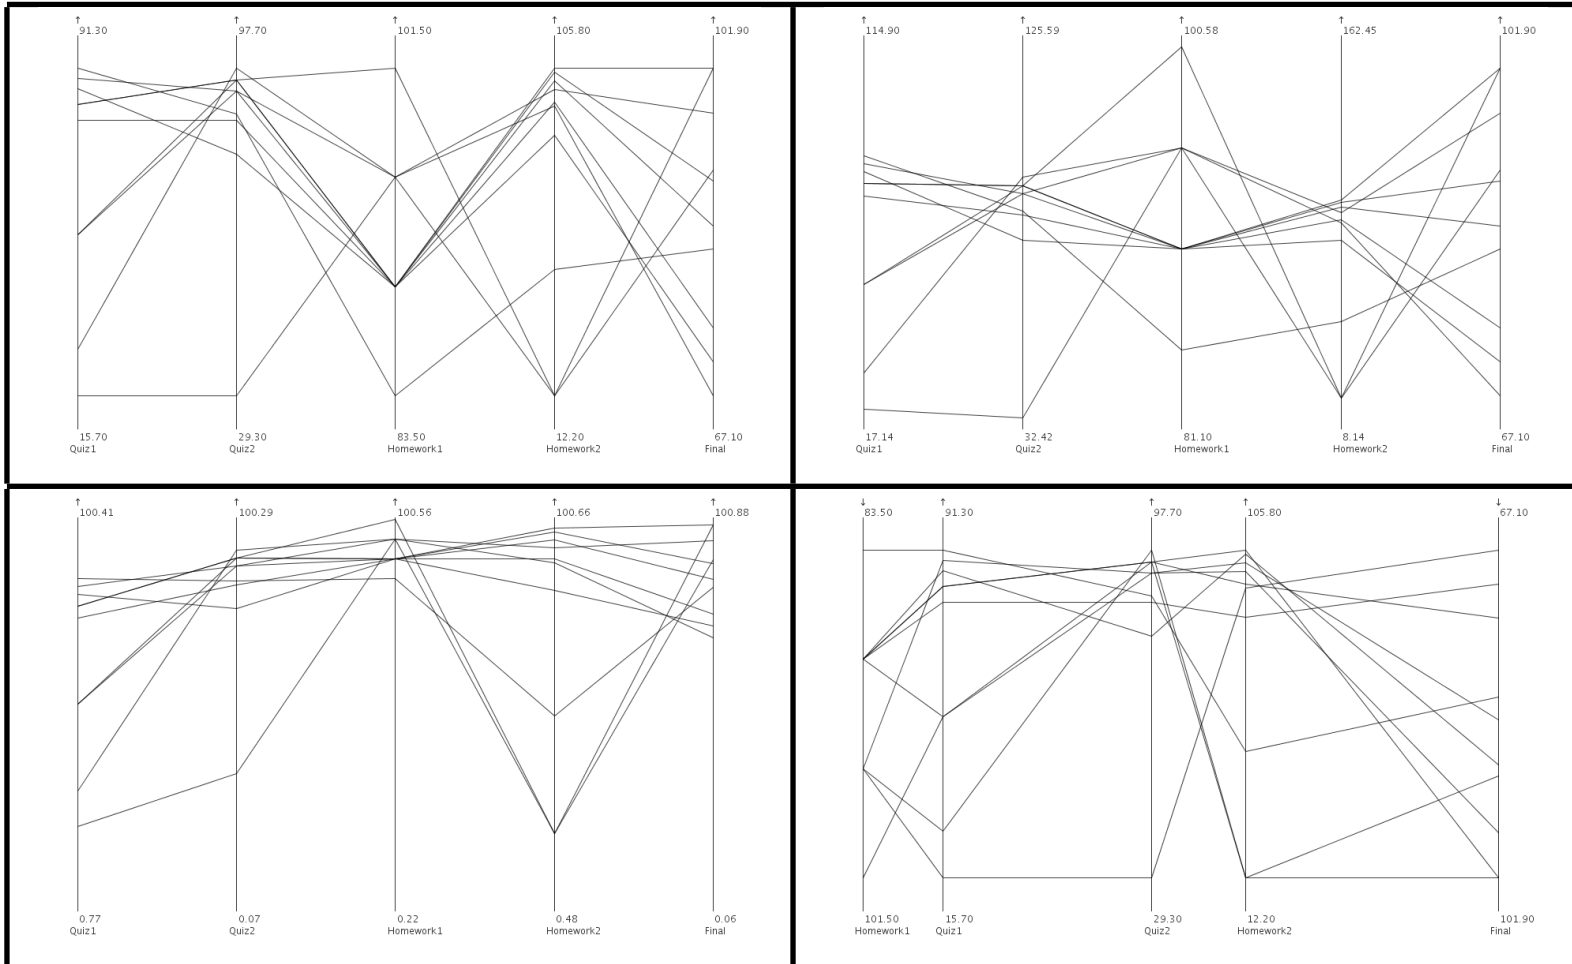

# Challenge: Axis parameters

View affected by axis ordering, sign, scaling, translation  
Solution: Interactive view manipulation

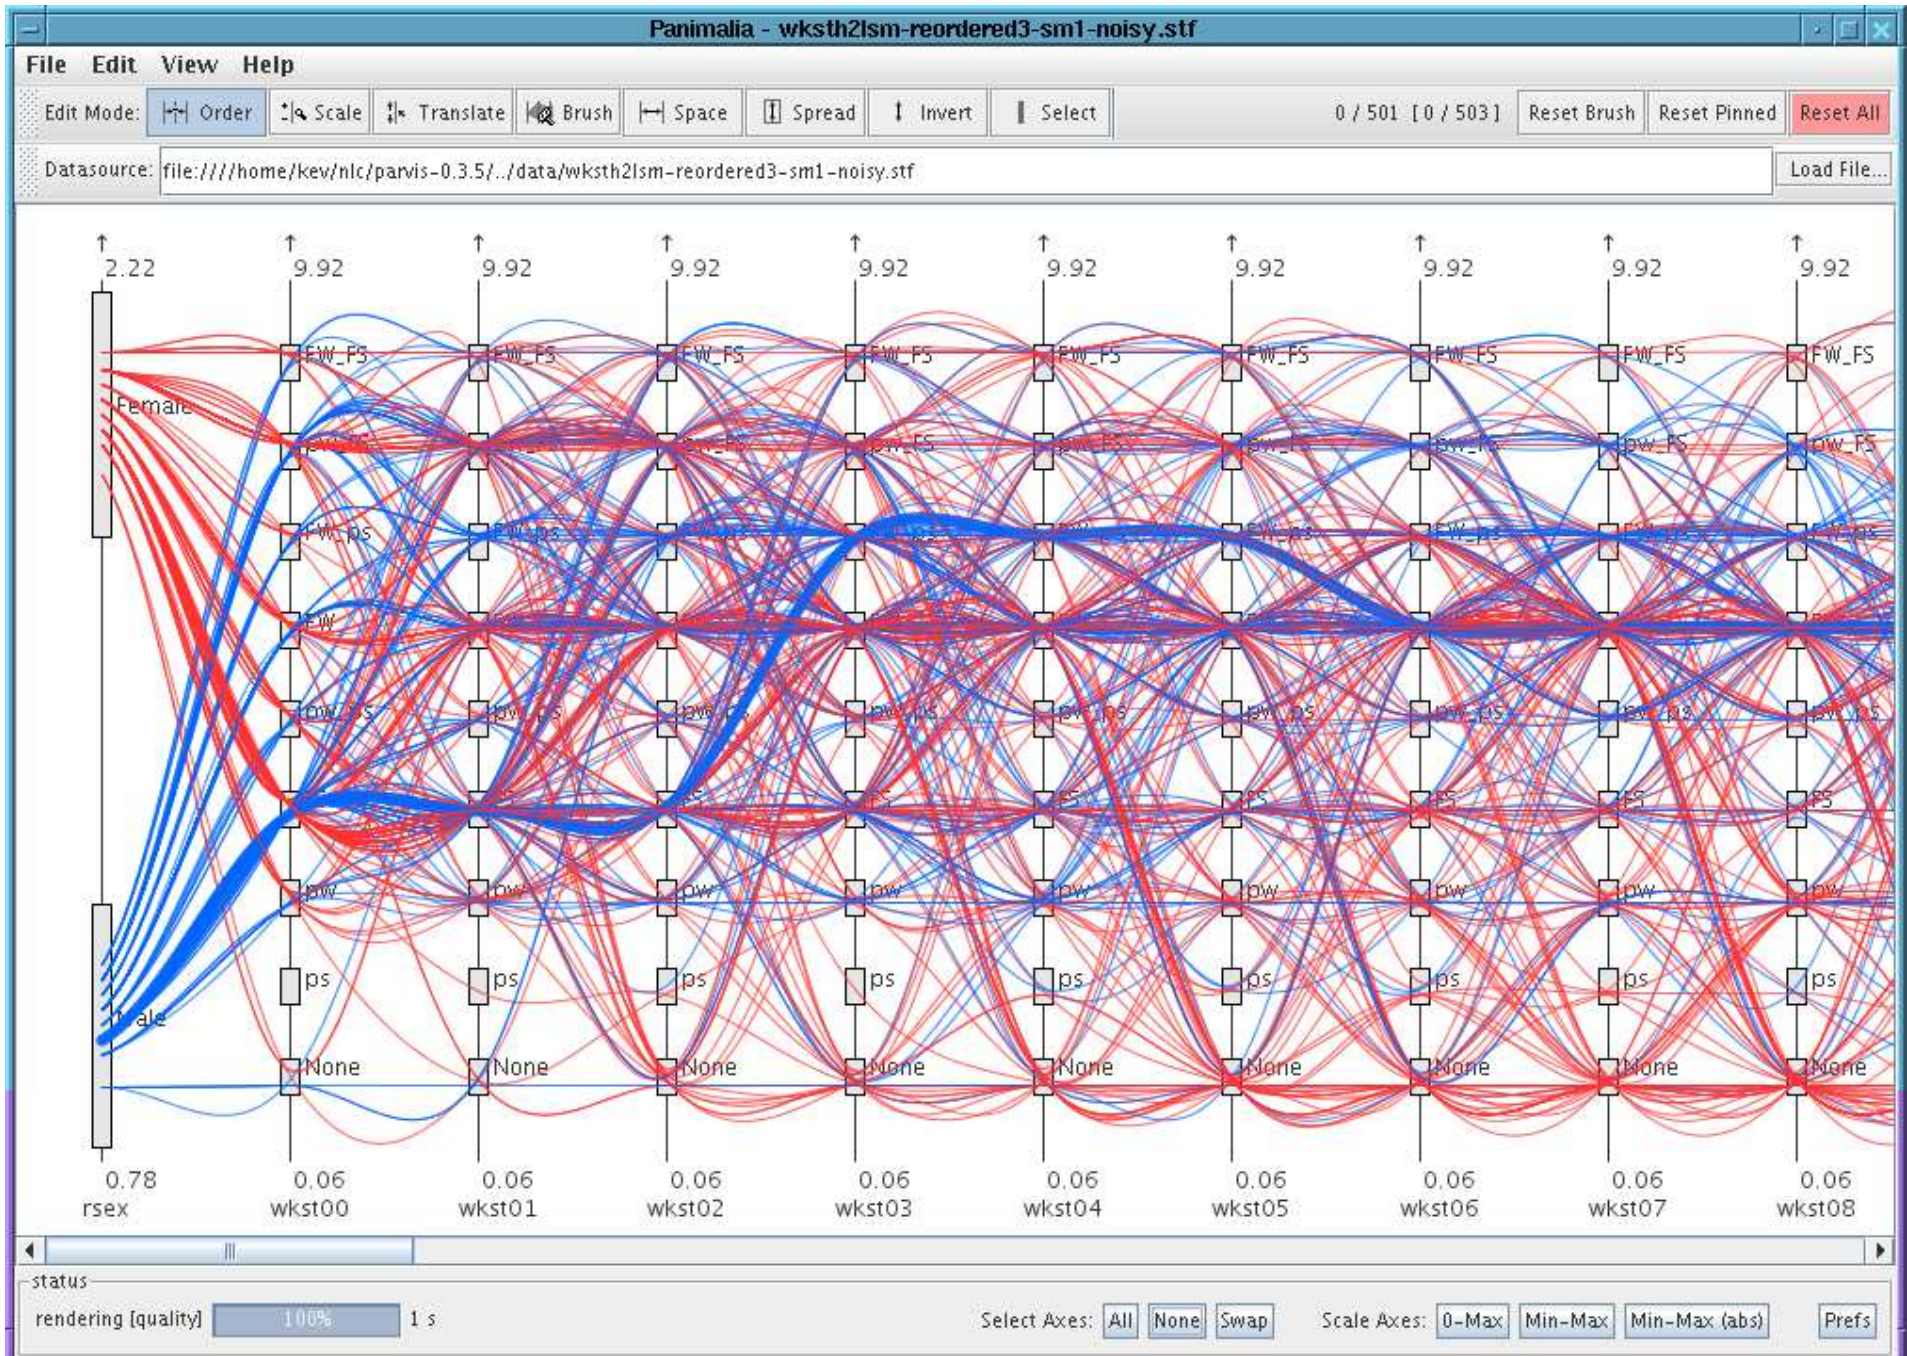

# Pilot implementation

---

- Based on “parvis” InfoVis research software
- Java application
  - Swing + Java2D canvas
- Issues highlighted:
  - Web integration: possible, but not optimal
  - Data storage: flat text files not scalable
  - Interactivity: poor responsiveness, usability
- Useful to confirm the use cases and benefits of longitudinal visualisation

# Pilot implementation

# Panemalia technology

---

- Frontend
  - DHTML (HTML5 + Javascript + CSS)
  - jQuery + jQueryUI
  - RaphaelJS (SVG or VML)
  - Requires modern browser
    - ▷ (But not Firefox on Linux)
- Backend
  - Ruby on Rails
  - SQLite
  - R
- Queries and results using AJAX + JSON

# Demo — NLC

---

## Negotiating the Life Course (NLC)

- 4 waves (unbalanced), 1000–3000 respondents
- Examine aspects relating to labour force participation
  - Work and study history
    - ▷ Retrospectively from age 15 (up to age 62)
    - ▷ Full-time, part-time, none

# Work/study: combined by age

# Work/study: combined by age

# Moving forwards

---

- Improved interactive performance
  - WebGL
  - Web workers (multithreading)
  - Remote desktop to ADA Virtual Lab VM
- State and session management
  - “How did I get to this view?”
  - “I had a great view 2 minutes ago, now it’s gone.”
  - Sessions spanning many days and locations
- Data cleaning
  - Allow sandboxed raw dataset upload, auto-convert and private visualisation
  - Standalone Panemalia in a desktop VM image

# Questions? Comments?
